

# Industry Leading Inspection Management Software

ACE Inspection® is an industry-leading, cloud-based inspection management solution designed to meet the rigorous demands of the life sciences industry. Understanding the critical importance of data integrity and seamless inspections, ACE Inspection® empowers your organization to efficiently prepare for, manage, and excel in both remote and in-person regulatory inspections. With advanced tools for real-time analytics and comprehensive data management capabilities, ACE Inspection® ensures that your inspection processes are efficient and streamlined.

## Key Features

### Advanced Data Tracking and Management

Unlike traditional methods like Excel spreadsheets, ACE Inspection® offers robust data tracking that allows you to manage inspection requests with precision and efficiency. Track every request, response time, and action taken in real-time, ensuring nothing falls through the cracks.

### End-to-End Inspection Management

ACE Inspection® supports your team throughout the entire inspection process. Before the inspection, the platform helps your team prepare by organizing and tracking common requests and essential documents. After the inspection, it handles all post-inspection activities, from closing out findings to analyzing results. With ACE Inspection, you can drive continuous improvement and stay audit-ready at all times.

### Configurable Workflows and Forms

Allow your team to design and manage the inspection process according to your unique requirements. This flexibility ensures that the workflow process, from managing inspection requests to overall inspection activities, is tailored to your specific operational needs. Create Kanban boards with the data important to you.

### Seamlessly Conduct Remote Inspections

The Inspector Portal in ACE Inspection® enables remote inspectors to securely access and review inspection-related documentation in real-time. Inspectors can view shared files within the portal or access documents directly through integration with Box.com. This feature streamlines the inspection process by ensuring inspectors have immediate access to all necessary information, regardless of location.

### Scribe Notes for Real-Time Documentation

ACE Inspection's Scribe feature allows your team to take detailed notes during inspections, capturing the flow of events, inspector comments, and interactions in real-time. These notes are shared with the entire team in real-time, ensuring that everyone is aligned and informed throughout the inspection process.

### Powerful Analytics for Continuous Improvement

ACE Inspection's analytics system goes beyond basic reporting, offering deep insights into your inspection process. Analyze request response times, track trends, and use this data to improve future inspections, making your operations more efficient and compliant.

ACE Inspection® includes ACE Regulatory Profiles™ and ACE Analytics®, allowing you to maximize your organization's pre- and post-inspection insights. Our holistic inspection management solution also includes a package of out-of-the-box workflows, making getting started easy, and minimizing implementation time and cost.

## ACE Analytics®

### Analyze Data

ACE Analytics® enables powerful reporting and dynamic dashboards, allowing you to analyze vast amounts of data from your inspections. This feature provides a clear and accurate overview of your inspections, helping you analyze request response times and improve future inspections.

## ACE Regulatory Profiles™

### Regulatory Inspector Information

An AI-powered solution offering a comprehensive database of regulatory inspectors, ACE Regulatory Profiles™ allows inspection teams to access detailed insights into inspector trends and focus areas. This feature empowers proactive compliance management, helping you anticipate inspection priorities and mitigate risk.
